

# **SUPER POWER FLOW RACING SUCTION**

## **Super Power Flow Has Evolved In Pursuit of Ultimate Intake Efficiency!**

### **HYPER STEALTH FRAME**

This frame exceeds the performance of previous Super Stealth Frame. Increasing air intake surface area by 27% improves air intake efficiency.

### **SUPER INNER FRAME**

The cross section of this frame is streamlined with 16 frames parabolically placed towards the center. Simple lightweight frame design provides smoother air flow.

### **SUPER LIP FUNNEL**

The defining feature of HKS intake: "Super Lip Funnel." This maximizes air intake surface area in the limited space in the engine bay and optimizes air intake efficiency.

### **3-LAYER DRY FILTER (SPF)**

This polyurethane filter provides high air intake efficiency, dust filtration, and long product life.

### **2-LAYER WET FILTER (RS)**

This 2-layer wet polyurethane form impregnated with a special high viscosity adhesive. Large filter porosity provides high air intake efficiency without sacrificing filtration ability.
